

TECHNICAL SPECIFICATION: (for LJ6C type)

Length (excluding earth stud):	162 mm
Width:	65 mm
Depth:	46 mm
Data Outlet Hole:	36.4mm x 22 mm
Conduit Entry Hole:	25mm

Description

IntroDelta manufactures data box in mild steel with a powder coated finish. The box comprises of two sections, the main housing and a rear mounting plate.

The main housing provides holes for four data outlets and comes with a 25mm conduit entry at the far end of the box. The conduit entry is slotted to the edge to enable retro-fitting. The rear mounting plate acts as a lid to the main housing. This section is hinged by means of two studs at one end and is secured by two screws at the other end. The screw holes are slotted to alleviate the need to removed the screws completely when removing the lid. The mounting plate has two cross keyhole cut-outs to allow the box to be secured to a surface on the inside surfaces of a desk, wall or pillar, etc. The box is provided with M6 earth studs on both inner faces and externally at the point of the conduit entry.

We can be manufactured for any systems outlets, all we require is the specific hole size or the details of the system to be used.

COLOURS

Black standard (any colour possibly please enquire)
